

# **WorkCenter vs WorkCenter Platform – What is the best choice for you?**

When acquiring WorkCenter, you have two options. WorkCenter comes with a “Platform” version and also a “Full WorkCenter” version. This flash video will display the main differences in these products.

The two main differences in the products relate to the WorkCenter Platform version. The Platform version does not give the user the ability to access the “Reports” tab or the “Action Plan” tab.

WorkCenter is priced to give the company users bulk purchase prices with multiple copies. We usually find that the Platform version is used by a smaller group that may wish to purchase up to 3 full versions of WorkCenter and then a copy of the Platform version to save costs.

The Platform version can do everything the full version can do except for running loan reports and action plans.

Some companies purchasing WorkCenter have determined that not all of their users need to run reports or action plans. If that is the case for your operation, you might consider purchasing a copy of the Platform Version that is approximately 50% less than the complete WorkCenter program for a single copy.

Call your Business Development Officer for more details about what WorkCenter options will be best for you and your operations.
