

Custom Scripts for Importing Data from your lead sources

Many of our WorkCenter users have subscribed to lead generation sources. The challenge with acquiring leads from lead generation sources is getting this information into a format that can be used for marketing and instant communications.

We have already created scripts for many lead generation sources that will allow you to take the leads you receive and import them into your copy of WorkCenter. vForms, the makers of WorkCenter, has been in the data synchronization business for years.

If for some reason we do not have a present script to take your leads from your lead generation source and import them into WorkCenter, please call your vForms - WorkCenter business development officer for a solution. Usually for a small technical fee, our programming staff can create a custom script to expedite the transfer of data into your personal copy of WorkCenter.
